

Recommended Sparts Parts List (RSP)

The recommended spare parts list has been produced with the purpose to support HTC's global network of subsidiaries, distributors, dealers and service workshops.

The RSP consist of high frequent moving parts and critical parts. By having the right parts in stock at the right quantity it will help you:

- * support customer's machine uptime
- * have high parts availability
- * keep stock costs at a minimum
- * enable stock replenishment orders instead of express orders - lower transport costs

Note! Make sure you order inverter and contactor applicable to your electrical standards.

If you have any questions regarding the RSP, please send a mail to: service@htc.se
